## The wide-angle lens

### For perfect perspective Control.

Image circle 72 mm

# PC-TS Super-Angulon 4.5/28 HM Aspheric

## For full frame DSLR system cameras:

### The ultimate in image *quality* .

Amazing new tilt/shift wide-angle lens:

With a 28 mm focal length, an image circle of 72 mm and dreamlike performance this lens will be the perfect solution for landscape, architectural and industrial photography and is designed to work with the high performing full frame DSLR camera bodies from all manufacturers.

The 12 mm of shift and 8° tilt allows for huge correction in perspective and movements with a quality never seen before. The advanced technology of the mechanics allows for movements independent of each other without degrading the image quality in resolution or in distortion which makes extreme displacements possible up to the edge of the coverage.

In combination with the latest camera technologies, the professional photographer now has a tool which can be compared with most medium format systems. The integrated lens hood blocks stray light and reflections and makes a usage of filters possible, especially the oversized polarizers.

- Lateral shift: 12 mm
- Tilt angle: 8 degrees
- Tilt vs. shift: 360 degrees
- Detent: every 30 degrees
- Tripod connection: 360 degrees, detent every 90 degrees
